

## FLOW PRO® Bulk Bin Agitators

Full bins with bridged feed can cause serious problems on the farm. Animals without feed can affect performance and welfare, increasing days to market. Workers having to exit buildings to beat and bang on feed bins can potentially compromise bio-security protocols on the farm and expose animals to dangerous pathogens.

**Flow Pro** improves feed flow out of bulk bins by providing gentle agitation inside the bin's plastic boot. With no high-frequency vibration or banging hammer devices, Flow Pro reduces bin wear-and-tear, promotes first-in, first-out feed flow, and prevents out of feed events that seriously affect animal performance.

### Get the Flow Pro advantage.

#### ENSURE ANIMALS ARE FED

Eliminate clumps entering feed lines or bridging in the bin so animals always have feed.

#### MINIMIZE BIN WEAR & TEAR

No high-frequency vibration and no-impact design keeps bins in top condition.

#### FULLY AUTOMATIC OPERATION

Operates automatically and reliably while feed lines are delivering feed.

#### ENSURE BIO-SECURITY

Eliminate exiting the barn to bang on bins to get feed flowing for improved bio-security.

### FLOW PRO SPECIFICATIONS

	Catalog No.	Description	Includes Plastic Transition	Boot Style	Motor
	FB-FP0001	Unassembled Kit Includes motor, plastic agitator guides, steel agitator, sensors, control, mounting brackets, fasteners	No	Straight	1P66-Rated 120/240 VAC 50/60 Hz, 1 PH
	FB-FP0003 (pictured)	Factory Assembled Kit Includes parts above and plastic transition (upper boot)	Yes	Straight	1P66-Rated 120/240 VAC 50/60 Hz, 1 PH
	FB-FP0002	Unassembled Kit Includes motor, plastic agitator guides, steel agitator, sensors, control, mounting brackets, fasteners	No	30-degree	1P66-Rated 120/240 VAC 50/60 Hz, 1 PH
	FB-FP0004 (pictured)	Factory Assembled Kit Includes parts above and plastic transition (upper boot)	Yes	30-degee	1P66-Rated 120/240 VAC 50/60 Hz, 1 PH

# FLOW PRO® Bulk Bin Agitators

“ We tested some of the very first Flow Pro units for Osborne and were immediately impressed by their ability to reduce feed bridging in our feed bins. Not once have we had to exit the barn to dislodge bridged feed on our bins equipped Flow Pro. We do, however, have to hammer on bins that aren't equipped with Flow Pro, so they really do work well at reducing bridging and empty feed lines. They have worked flawlessly since they were installed.

— Jerry M. - Lincoln, AR  
Poultry Producer ”

## IMPROVE FEED FLOW

- Prevents feed bridging
- Promotes first-in, first-out flow
- Eliminates clumps that clog feed lines and disrupt delivery
- Prevents out-of-feed events

## EASY TO INSTALL & USE

- Automatically activates with feed delivery system
- Installs with feed in the bin
- Available for straight and 30-degree plastic transitions

## REDUCE BIN WEAR & TEAR

- No high-frequency vibration
- Impact-free design
- 100 RPM, IP66 outdoor-rated agitator motor
