

OSBORNE®

Stanfield® Heat Pads Heat Pad Indicator Light

The new **Heat Pad Indicator Light** provides visual confirmation that your Stanfield® Heat Pads are providing heat for newborn piglets in farrowing and growing pigs in nurseries. Unlike other heat pad indicators, the Osborne Heat Pad Indicator Light features two lights. The bright **red** LED shows that the electrical circuit is functional, while the **green** LED assures producers that individual heat pads are drawing electricity and providing heat. This dual-light system helps producers troubleshoot electrical problems or locate heat pads requiring attention. The system mounts on standard, sealed single-gang electrical boxes and eliminates the need for infrared temperature wands or physically inspecting each pad to ensure it is properly heating.

Dual Light System RED LIGHT - POWER

Indicates the electrical circuit is operating properly and power is available for each Stanfield Heat Pad.

Dual Light System GREEN LIGHT - HEAT

Assures workers that a Stanfield Heat Pad is drawing power and providing crucial heat for piglets.

U.S. Patent 9,361,770. Other Patents Pending.

Heat Pad Indicator Light

Catalog #: FE-HPL001
120/240 VAC
Maximum Current 20 Amps

Heat Pad Cord Protector

Catalog #: FH-00F150

2 x 4' Heat Pad

Catalog #: FH-RS2B40

The patented system works on variable voltage systems, or controlled circuits, with **consistent brightness of the lights**. This means, even if the temperature of your heat pads is controlled by a ramping controller, the LED lights constantly remain bright and visible from the aisleway, even as power is reduced to the heat pad!
