

Wind can slow or stall exhaust fans, seriously affecting barn ventilation rates. This wind pressure problem can be especially severe in winter months when small or variable speed fans are operating at low speed.

Osborne Agri-Aide® Wind Diverters greatly reduce wind pressure without interfering with exhaust rate in still air. The venturi effect created by wind accelerating past the wind diverter actually assists the exhaust fan. More importantly, Wind diverters can be retrofitted to nearly all existing exhaust fans!

The Wind Diverter Kit (WDK) from Osborne includes a white, ultra-tough Osborne RTM-Glas™ fiberglass wind diverter cone, aluminum brackets, stainless fasteners, and complete installation instructions.

Wind Effect on Fan Output

* Varies with temperature, humidity, animal stocking density, animal type and ventilation system.

To choose the proper Wind Diverter Kit for other fans, measure the diameter of the fan hood (or diagonal if square hood) and add two (2) inches. Order the WDK whose diameter equals or exceeds the value.

Call Osborne Customer Service or visit our website for information and ordering.
